A DATA FILTER MANAGEMENT DEVICE

5 A data processing device (1) is installed in a data
processing server (2) adapted to receive primary data and
to transmit said primary data after application by
control means (5) of dedicated processing based on
primary rules. The device comprises, firstly, a first
10 table (T1) in which are stored sets of at least one
primary rule, called "primary metarules", in a
parameterizable form, in corresponding relationship to
primary identifiers, and, secondly, management means (8)
intended to be coupled to the control means (5) and
15 adapted, on receipt of auxiliary data representing
operating parameters delivered by the control means (5)
after the reception by the server (2) of secondary data,
to select at least one of the primary identifiers in the
first table (T1) and associate the auxiliary data
20 therewith in such a manner as to define the dedicated
processes.
